

DILUTING PEDIATRIC PFIZER COVID-19 (5-11 YEAR OLDS)

1

- When vial is fully thawed, gently invert 10 times - DO NOT SHAKE

IMPORTANT: Vial does not need to reach room temperature prior to dilution; please ensure it is fully thawed

2

- Firmly & briskly wipe surface of both vial stoppers/ampule neck with a new alcohol swab
- Allow to dry for 10 seconds

3

- Draw up **1.3 mL** saline & gently dilute vaccine

4

- Pull needle back into vial air space but do not remove. Withdraw ~1.3mL of air to equalize

IMPORTANT: Discard remaining diluent immediately; remainder cannot be used for dilution of subsequent vials

5

- Gently invert diluted vial 10 times to mix
 - DO NOT SHAKE
- Discard any unused vaccine 12 hours after dilution
